

# IEEE Education Society Days 2026

**Theme:** *Engineering Education at the Nexus of AI, Human Intelligence, and Global Transformation*

**Date:** 8 May 2026

**Format:** Virtual Global Event | 11:00 – 20:00 UTC

## **Event Abstract:**

The rapid convergence of artificial intelligence, digital technologies, and global societal transformation is fundamentally redefining engineering education. Universities, educators, industry leaders, and professional societies must collectively re-examine how engineers are educated, how educators are supported, and how learning ecosystems evolve to prepare the next generation of innovators.

**IEEE Education Society Days** will serve as a flagship global event to bring together IEEE Education Society members, volunteers, IEEE leaders, and the broader IEEE community to reflect on the evolving mission of engineering education. This event will highlight the Society's leadership in advancing pedagogical innovation, supporting educators worldwide, fostering global collaboration, and shaping the future of engineering learning.

Through visionary keynote presentations, panel discussions, and global showcases, the event will explore resources, products, and services offered by the Education Society, the role of AI as both a transformative tool and a subject of education, the importance of human-centered learning in an AI-augmented world, and the critical role of IEEE volunteers in advancing educational excellence.

IEEE Education Society Days will not only celebrate the Society's impact but will also serve as a platform to inspire engagement, strengthen community, and align IEEE's global educational mission toward shaping the future of engineering education for humanity.
